JobPilot

User guide: sign up, sign in and use the job portal end to end

Portal address
https://yadava-krishna.github.io/Job_portal/

Invite code (needed once, to create your account)
_____ (provided by the portal owner)

You stay in control. JobPilot finds jobs and scores them against *your* resume, prepares your answers and tracks your progress. It never applies on your behalf: you always submit each application yourself on LinkedIn, Indeed or Naukri, and you decide what counts as applied.

16 Quick reference and FAQ

1. What JobPilot does (and doesn't)

JobPilot is a private job-search workspace. Each person has their own account, resume, preferences, job feed and application history.

JobPilot does	JobPilot does not
Reads your resume PDF and builds an editable profile	Invent skills, experience or qualifications
Collects jobs you clip, paste or upload, plus your own job-alert emails (if you connect them)	Scrape job sites or use your LinkedIn/Indeed/Naukri login
Scores every job against your profile (0–100) and explains why	Submit applications for you
Prepares a checklist, screening answers and an optional cover letter	Guess salary, notice period or other personal answers
Tracks prepared, submitted, interview, offer and rejected applications	Mark a job as applied just because you opened it
Creates Excel reports of your own activity	Show your data to any other user

Match categories: Excellent 85–100 · Good 70–84 · Moderate 55–69 · Low below 55. The score combines skills (35%), experience (25%), responsibilities (20%), education (10%) and location/preferences (10%). You can change these weights in Settings.

2. Before you start

- A computer or phone with a modern browser (Chrome, Edge, Firefox or Safari). A computer is best for the browser clipper.
- Your resume as a **PDF** (text-based, not a scanned photo), up to 5 MB.
- The **invite code** from the portal owner.
- Optional: accounts on LinkedIn, Indeed and/or Naukri, where you will apply.
- Optional: job alerts set up on those sites, sent to your email, if you want JobPilot to read them.

3. Create your account

1. Open **https://yadava-krishna.github.io/Job_portal/**. If you see a short “Connecting to the job portal…” message, wait a few seconds.
2. On the sign-in page click **Create an account**.
3. Enter your full name and email address.
4. Choose a password. It must have **at least 10 characters**, **upper- and lower-case letters** and **at least one number**, and must not contain your email name. Ticks turn green as each rule is met.
5. Type the password again in **Confirm password**.
6. Enter the **Invite code** exactly as given (it is case-sensitive).
7. Click **Create account**. You are signed in and taken to the setup steps (section 5).

Common messages: “A valid invite code is required”: check capitals and lower-case letters in the code. “An account with this email already exists”: sign in instead. “Too many attempts”: wait one minute and try again.

4. Sign in, sign out and forgotten passwords

Sign in: open the portal, enter your email and password, and click **Sign in**. You stay signed in on that browser for up to 14 days of inactivity.

Sign out: click **Sign out** at the bottom of the left menu (on a phone, open the menu with ☰ first). Always sign out on shared computers.

Forgot your password? Password reset by email is not available yet. Ask the portal owner to reset your account.

5. Set up your profile (onboarding)

The first time you sign in, JobPilot walks you through five steps. You can go back to earlier steps with the numbered circles at the top.

Step 1: Upload your resume

1. Drag your resume PDF onto the upload box, or click it and choose the file.
2. Wait a few seconds while it is read. A message confirms “Resume uploaded and parsed”.
3. Click **Continue**.

Step 2: Review your profile

Everything here was read from your resume. **Check every field and correct mistakes**; only what you confirm is used.

- **Skills:** type a skill and press Enter to add it; click × to remove. Only list skills you really have.
- **Experience:** check job titles, company names and the start/end months. Tick **Current** for your present job. Total experience is calculated from these dates, and overlapping jobs are counted once.
- **Education, certifications, projects, achievements, languages:** fix anything incomplete.
- If a yellow “Please check” box appears, read it. It points to something the reader was unsure about.

Click **Confirm profile & continue**.

Step 3: Job preferences

- **Target domains / industries:** add one or more (e.g. Finance, Healthcare Operations).
- **Preferred job titles:** required. Add every role you want (e.g. Financial Analyst, FP&A Analyst).
- **Locations** and **work mode** (Remote, Hybrid, On-site).
- **Expected salary** (currency, minimum, maximum), **experience range** and **employment type**.
- **Excluded companies:** jobs from these are marked “not eligible”.
- **Minimum match to shortlist:** jobs scoring at or above this go to your shortlist (70% is a good start).

Click **Save & continue**.

Step 4: Choose job portals

Switch on LinkedIn, Indeed and/or Naukri, and tick how jobs should reach JobPilot for each: **Browser clipper** (recommended), **job URL**, **file import**, **job-alert email** or **manual search links**. Click **Save & continue**. This page also shows the browser clipper button (section 6).

Step 5: Confirm

Check the summary and click **Start discovering jobs**. You can change everything later in **Settings**.

6. Add the browser clipper (recommended)

The clipper is a bookmark that copies the job you are looking at on LinkedIn, Indeed or Naukri into JobPilot, including the full description. It works in your own browser where you are already signed in to those sites, and it only runs when you click it.

1. Show your browser's bookmarks bar: press **Ctrl + Shift + B** (Mac: **Cmd + Shift + B**).
2. In JobPilot go to **Settings → Platforms** (or onboarding step 4) and find **Browser job clipper**.
3. **Drag** the **Clip to JobPilot** button onto your bookmarks bar. Don't click it; drag it.
4. Open any job posting on LinkedIn, Indeed or Naukri.
5. Click the **Clip to JobPilot** bookmark. A new tab opens JobPilot with the job details filled in.
6. Check the details (title, company, location, description) and click **Save & score**.

Tips: If a pop-up blocker warns you, allow pop-ups for that job site. If some details are missing (job sites change their layout), **select the job description text on the page with your mouse first**, then click the bookmark; the selected text is used. You can also edit any field before saving.

7. Add jobs to your feed

Open **Discover jobs** in the left menu. There are several ways to bring jobs in:

Method	How
Browser clipper	Click the bookmark on a job page (section 6). Best option: full description and posting date.
Add job	Click **Add job** → **Paste details**. Paste the job URL and the full description, add title, company, location and posting date if you know them, then **Save & score**.
Upload file	**Add job** → **Upload file**: a JSON, CSV or TXT list of jobs.
Job-alert emails	Connect your mailbox in **Settings** → **Alert emails** (section 13), then click **Check sources**. JobPilot also checks automatically every morning at 9:00.
Search links	Click **Search links** for ready-made searches on each site based on your preferences. Open them, then clip the jobs you like.

Searching and filtering: type in the search box and click **Search**. Use the platform chips, the date chips (**Posted today**, **Last 24 hours**, **Date range**) and **Filters** (domain, location, your experience, work mode, minimum match, sort order).

About posting dates: "Today" is shown only when the date is confirmed (from the listing page, an official source, or entered by you). Otherwise you see "Unknown" or "On or before <date> (alert email)".

Duplicates: adding the same job twice never creates a second entry. You'll see "already in your feed".

8. Read the match score and the full job description

Each job card shows the score ring, title, company, platform, location, work mode, posting date, experience, salary, **matching skills** (green), **missing skills** (amber) and a short description.

Click **View full JD** to open the side panel:

- **Matching analysis:** each score part with a bar and the reason behind it.
- **Why it fits / Gaps** and a recommendation.
- **Required qualifications**, responsibilities and the **complete job description**.
- **Original listing** button to open the job on its site.
- If only a short snippet exists, paste the full description into the box and click **Save description & re-score**.

Keyboard shortcuts on the Discover page: j/k move between jobs · **o** open · **s** save · **a** apply · **d** dismiss.

9. Apply to a job, step by step

1. On a job card (or in the full JD panel) click **Apply**.
2. **Review the package.** JobPilot shows a checklist (is the link official, is the job still open, any warnings), the **screening questions with prepared answers**, the **resume** it will use and, if needed, a **cover letter** you can copy.
3. Answers marked **Needs your input** were not guessed. Fill them in on the job site yourself, or save them once in **Settings → Verified answers**.
4. Click **Open original listing**. The job opens in a new tab on LinkedIn, Indeed or Naukri.
5. **Apply there** as you normally would (Easy Apply, Indeed Apply, Naukri Apply or the company's site).
6. Come back to the JobPilot tab. It asks **"Did you submit the application?"**
7. If you submitted: optionally paste the **reference ID** or **confirmation message**, then click **Yes, I submitted it**. The job moves to **Applications** and leaves your discovery list.
8. If you did not apply, click **I didn't apply**; the job stays in your feed. Not sure yet? Click **Not sure yet** (status: confirmation pending) and finish later from **Applications → Pending**.

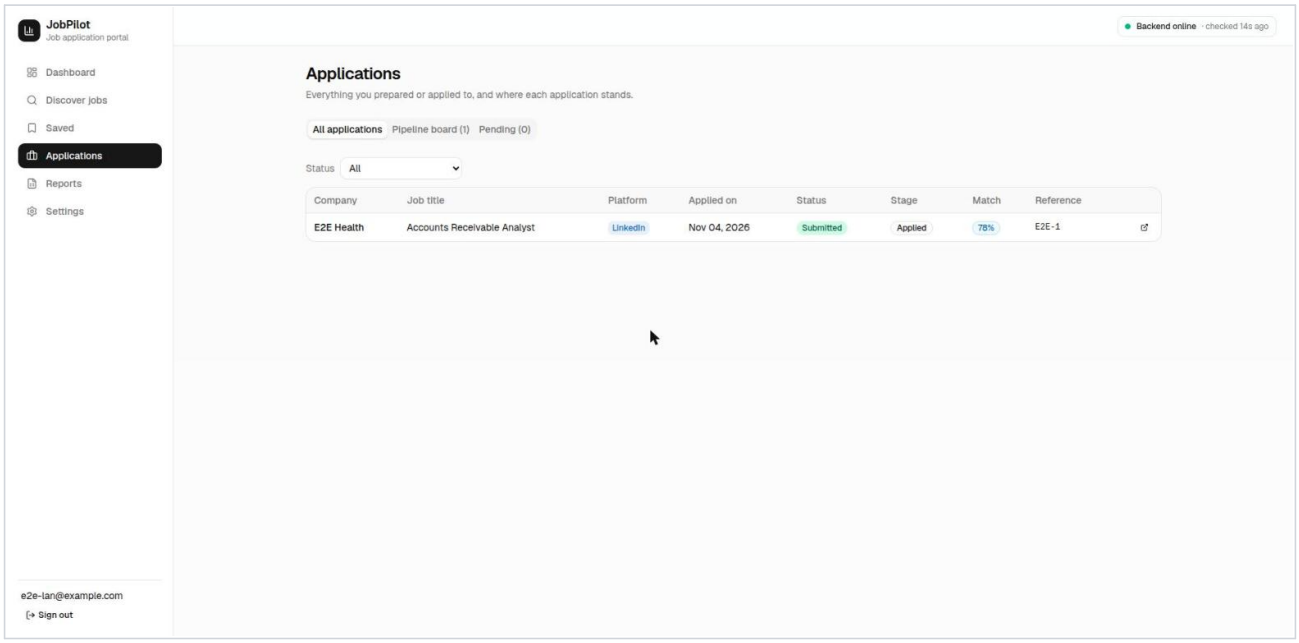

> Opening the job page never marks it as applied. Only your confirmation (or a matching confirmation email from the job site, if you connected your mailbox) does. You can't create two applications for the same job, and JobPilot warns you if you already applied to the same role at the same company on another site.

10. Track your applications

Open **Applications**. There are three tabs:

- **All applications:** company, job title, platform, application date, status, stage, match score, reference ID and a link to the original listing. Filter by status. Click a job title for its full history.
- **Pipeline board:** submitted applications in columns **Applied → Screening → Interview → Offer / Rejected**. When you hear back, use the drop-down on a card to move it.
- **Pending:** prepared or opened applications you haven't confirmed yet; click **Continue** to finish.

Status	Meaning
Prepared	Package ready; you haven't opened the listing yet
Opened	You opened the original listing; not applied yet
Confirmation pending	You came back but haven't confirmed
Submitted	You confirmed the submission (or a confirmation email matched)
Failed / Withdrawn	Couldn't apply (e.g. job closed) / you withdrew

Applications page: a submitted application with its reference ID.

11. Saved and dismissed jobs

- Click **Save** on any job to bookmark it; find it under **Saved**. Click it again to remove the bookmark.
- Click **Dismiss** to hide a job you're not interested in. A **Undo** button appears briefly. Dismissed jobs are never deleted.

12. Download your Excel reports

- Open **Reports**.
- **Today’s report (Excel):** today's jobs and application activity.

- **Full history (Excel):** everything since you joined.
- Earlier reports stay in the list for download; they are never overwritten. A daily report is also created automatically after the 9:00 check.
- Each workbook has *Application Details* (35 columns, including the full description and match explanation), *Daily Summary*, *Job Analysis*, *Errors and Logs* and *Search Links*. Reports contain **only your own data**.

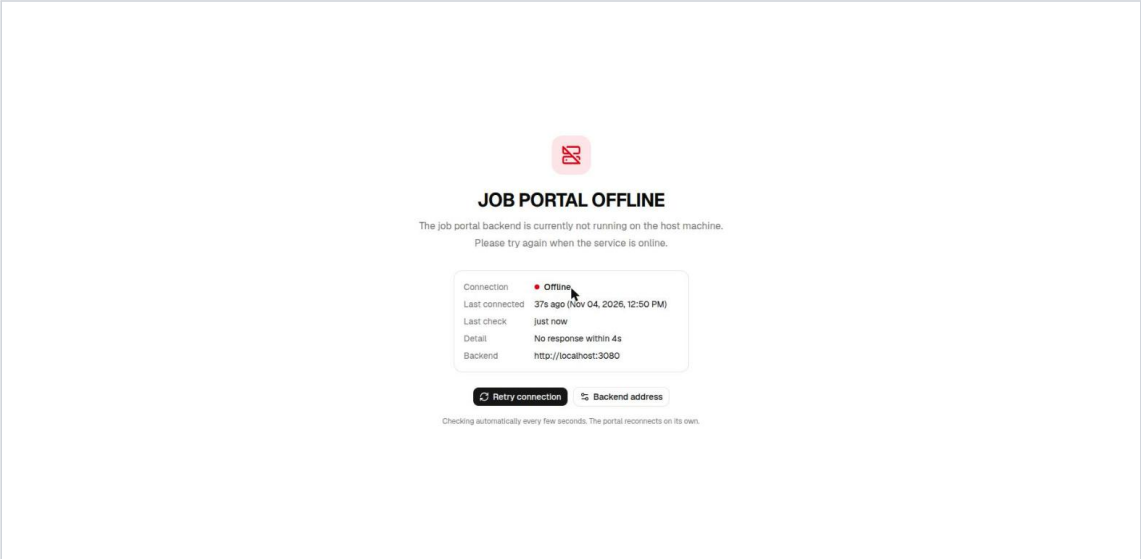

13. Settings you should fill in

Tab	What to do
Resume & profile	Upload a newer resume (it's re-read; review the profile afterwards), edit your profile, download your current resume.
Job preferences	Change roles, locations, salary, minimum match and scoring weights. Your jobs are re-scored automatically.
Platforms	Switch LinkedIn/Indeed/Naukri on or off, choose sources, and get the browser clipper.
Verified answers	Your current CTC, expected CTC, notice period, start date, relocation, work authorization and shift preference. Only these values are used to answer such screening questions. Leave a field empty to be asked each time.
Alert emails	Optional. Connect the mailbox that receives your job alerts: IMAP server (Gmail: imap.gmail.com, port 993), your email address and an **app password** (Gmail: Google Account → Security → 2-Step Verification → App passwords). Read-only; the password is stored encrypted.
Account & connection	Your account details, sign out, and the backend address (only change it if the portal owner asks).

14. If you see “JOB PORTAL OFFLINE”

The portal runs on its owner's computer. When that computer or the service is off, you see a full-screen **JOB PORTAL OFFLINE** message with the last successful connection time. All actions are paused, so nothing you do can be lost half-way.

- Wait. The page checks every few seconds and **reconnects by itself**; you stay signed in and your data reloads.
- Click **Retry connection** to check immediately.
- If it stays offline for a long time, contact the portal owner.
- Only use **Backend address** if the owner gives you a new address.

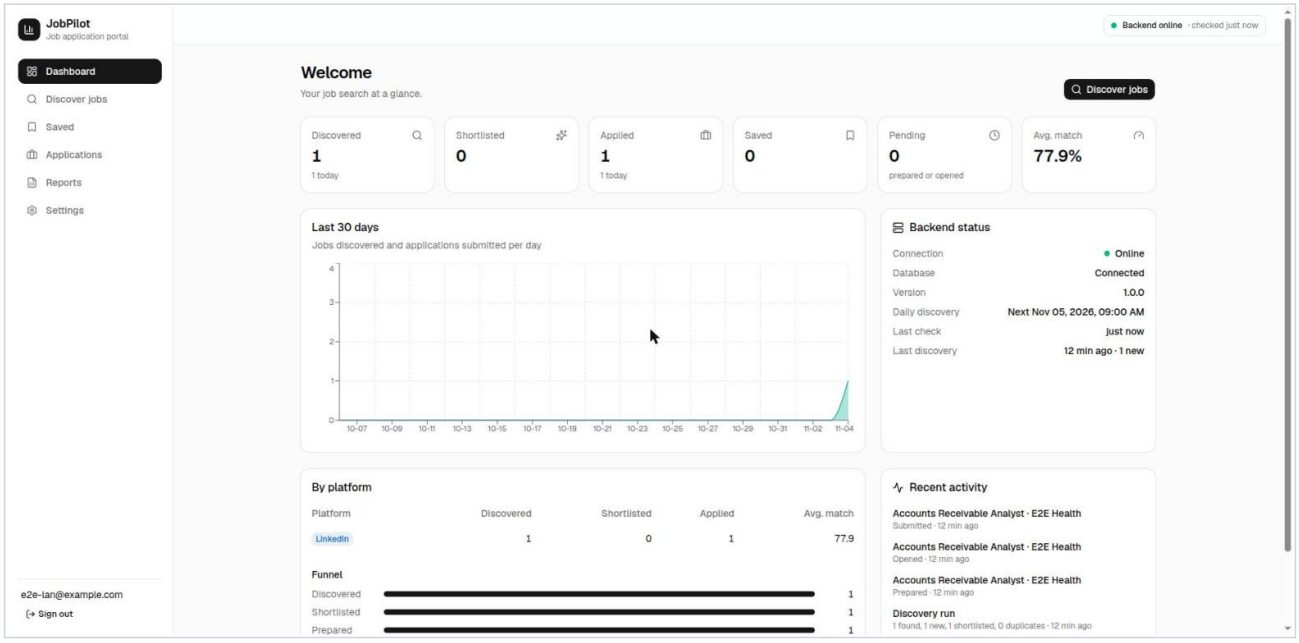

The offline screen shown while the service is stopped.

15. Privacy and security

- Your resume, profile, preferences, jobs, scores, applications and reports are visible **only to you**.
- Your password is stored in a scrambled (hashed) form that can't be read back, even by the owner.
- JobPilot never asks for your LinkedIn, Indeed or Naukri password and never uses your logins on those sites.
- The connection is encrypted (https). Sign out on shared computers.
- Only upload your own resume.

16. Quick reference and FAQ

Question	Answer
Will JobPilot apply for me automatically?	No. You always submit on the job site. JobPilot prepares and tracks.
Can other users see my resume or jobs?	No. Every account is completely separate.
Why is a job's score low?	Open **View full JD** to see each part and the gaps. If the job has no full description, paste it and re-score.
Why does a job say “Not eligible”?	It breaks a hard rule from your preferences (e.g. excluded company, location, or far more experience required). The reasons are listed in the JD panel.
Why is the posting date “Unknown”?	The date couldn't be confirmed. Clip the job from its page, or enter the date when adding it.
I applied but forgot to confirm.	Go to **Applications → Pending → Continue → Yes, I submitted it**.
I clicked Apply by mistake.	Click **I didn't apply**. Nothing is recorded as applied.
The clipper filled in the wrong details.	Edit the fields before saving, or select the description text on the page before clicking the bookmark.
Can I change my resume later?	Yes: **Settings → Resume & profile**. Review the profile after uploading.
The portal says offline.	It reconnects by itself when the service is back (section 14).

Dashboard: totals, 30-day activity, backend status, per-platform results and recent activity.
